

TOP 10 TIPS:

Connecting inside the office

- 1 Extend your existing wired network.** Add wireless capabilities to connect to your current network from anywhere inside the office.
- 2 Determine if your business has T-1, DSL or another type of working Internet connection.** You will need this information when determining what type of network you need.
- 3 Determine if your equipment has integrated Wi Fi.** Maximize your business technology - look into Wi Fi adapters.
- 4 Know what devices you want connected to your network.** They should benefit productivity and connect with proper access points.
- 5 Know your needs.** A large office of 25 or more connections requires additional access points.
- 6 Develop a budget.** Purchasing equipment can add up, so stick to your budget when considering new hardware.
- 7 Contact multiple service companies.** This will ensure you are working with the best one for your needs and budget.
- 8 Take security precautions.** Customize access and security for employees and guests.
- 9 Equipment placement is critical.** Place network access points high above and away from other non-network electronics.
- 10 Test your system.** Simulate realistic situations where networking will be used to ensure your network is set up to meet all your needs.
